Flywheels are used for uninterruptible power supply (UPS) systems in data centers due to their instant response capital cost and leveled cost of storage. The costs of composite and steel rotor f ywheels are \$190 and \$146/MWh, respectively. Flywheel energy storage systems are increasingly being considered as a promising alternative to electro-chemical batteries. They typically have power ratings of 1 MW or more . The Flywheel energy storage systems (FESSs) are a type of energy storage technology that can improve the stability and quality of the power grid. Compared with other energy storage systems, FESSs offer numerous advantages, including a long lifespan, exceptional efficiency, high power density, and minimal RotorVault's storage product for data center applications is the most cost-competitive solution offering both backup power for critical IT and active power conditioning. When technologies like lithium batteries are used for power conditioning, they drive high operations and maintenance costs.
