

## Lithium battery pack structure and price

---

How much does a lithium battery cost in ?In , the average global prices of lithium-ion batteries dropped by 20%, reaching \$115 per kWh. For electric vehicle batteries, the price fell below \$100 per kWh Why Are Lithium Battery Prices Falling? Why are lithium batteries so expensive?Lithium, cobalt, and nickel are the most important components. Their prices often change due to supply and demand. In recent years, lithium prices have dropped sharply. This happened because more companies started mining lithium and demand slowed down. BloombergNEF reports that battery pack prices closely follow raw material costs. How much does a lithium battery cost in China?Meanwhile, the stationary storage market has surged, with intense competition among cell and system suppliers, particularly in China. Regionally, the average prices of lithium battery packs were lower in China, at \$94 per kWh, while prices in the U.S. and Europe were 31% and 48% higher, respectively. How are materials costs of lithium ion batteries calculated?The breakdown covers 25 categories (e.g., lithium, nickel, graphite), across 10 different battery chemistries (e.g., NCA, NMC, LFP and others, chart below). Materials costs of lithium ion batteries can be calculated by comparing our mass balances above with the costs of different input commodity prices. How much does a lithium battery cost?Outdoor power tools and forklift lithium battery costs depend on amp hours, ranging from \$110 for 2 Ah models to \$335 for 12 Ah. Solar and energy storage system batteries show similar trends. The table below provides a detailed breakdown: Prices in continue a downward trend from previous years, making lithium batteries more affordable.
