What is a power supply restriction? A power supply restriction is usually carried out when a customer fails to settle electricity bills within the settlement period specified in its supply agreement or contract of supply with the provider of the electricity. How is a power supply restriction carried out? How many external power supplies are there in the EU? In 2017, 1.7 billion external power supplies (EPS) were in use in the EU27, of which 75% for residential use, on average 6.5 units per EU household. They converted 48 TWh/a of electricity from the 220V mains to the input needed by the powered products. How much clearance do I need for a modular power supply? This will require clearance limit 1.48 times of IEC/UL 60950-1 unless your device marked as suitable for use only up to m. New modular power supply has been designed to exceed regulatory safety requirements at M for creepage and clearance. The new product is fanless. What is no-load power consumption? No-load power consumption is the power consumed when this is plugged into a power outlet but not connected to a device. Voltage converters, uninterruptible power supplies, battery chargers, halogen lighting converters and external power supplies for medical devices are excluded from these requirements. What is the new regulation on power consumption? From April 2015, Regulation (EC) 278/2009 was replaced by Regulation (EU) 2015/1181. The rules apply to both the active efficiency and the no-load power consumption. Active efficiency is the average efficiency when a power supply is connected to a device, for example a laptop, when it is being used. How much money will EU27 users save on external power supplies? In 2017, due to Ecodesign measures, EU27 users saved EUR 0.9 billion on external power supplies. This is projected to increase to EUR 1.3 billion in 2020, a 16% saving. In 2017, the annual household expenses for EPS are projected to decrease from EUR 33 (without measures) to EUR 28. The EISA act regulated all single-output external power supplies up to 250W of output power and stipulated minimum efficiency requirements for external power supplies, including standby power consumption at no load. Precautions for using Outdoor power supply Apr 12, 2017, &#x2013; &#x2013; Avoid overload: If the power supply automatically shuts down or alarms, immediately reduce the load. Use original charger: Non original chargers may damage the External Power Supplies Voltage converters, uninterruptible power supplies, battery chargers, halogen lighting converters and external power supplies for medical devices are excluded from these requirements.
