Should I expand my solar panels? Some common reasons to expand your solar panels are getting an electric vehicle, installing a battery, electrifying your home, or making home upgrades like an addition or a new pool. You may not know where to begin if you think you need more solar. Can I add more solar panels if my roof is old? Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system. Why add solar panels to an existing solar system? What happens if I expand my solar system? If you installed solar panels under the old net metering policy and expand your system by more than 10% or 1 kilowatt (kW), you'll be moved to the new program, Net Billing, or NEM 3.0, resulting in lower solar savings. How much can you save with local solar incentives? What happens if you change your solar energy system? When you change an existing solar energy system, your utility company can force you to adopt newer incentives for your entire set of solar panels--not just the new ones. (Or at least any panels that are tied to your home's electrical meter, and by extension the grid.) How many solar panels do I Need? Adding between five and ten panels is usually enough to cover increased electricity usage, but it ultimately depends on how your usage has changed. Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. How much does it cost to install new solar panels? Unfortunately, there is no one-size-fits-all answer to what adding new panels will cost, but in general, you can expect it to be around the same average cost to install solar, about \$3.00 per watt. The following table outlines an estimated cost for installing additional solar panels to your existing system: *Assumes 400-watt panels
