What is the optimal power system expansion plan for Mozambique? The optimal power system expansion plan if wind and solar capacity are allowed to triple to reach almost 3 GW by . Currently, the power system of Mozambique is separated into two transmission networks isolated from one another: the Central-Northern and Southern systems. Over 50% of the annual power demand is seen in the Southern system. What role does hydropower play in decarbonizing the power sector in Mozambique? Hydropower projects play an important role in decarbonizing the power sector in Mozambique. The system flexibility built in this decade will be necessary to support the increase of hydro generation in the system, since water availability varies from year to year. Why is technology modularity important in Mozambique? Technology modularity also plays a key role. Mozambique requires between 100 MW and 500 MW of new generation annually to be built across the country to be able to meet the increasing demand. On a regional level, this represents 60 to 80 MW of new power generation. When will domestic gas be available in Mozambique? Domestic gas from the Northern coast of Mozambique is expected to be available by . The pressing challenge for Mozambique's energy authorities is to ensure that the entire population gets affordable and uninterrupted access to electricity over the next decade.
