

solar power stations need energy storage

Understand that solar panels capture sunlight and convert it into electricity, but they do not inherently store the energy they generate. To store solar power for later use, you'll need to integrate a separate energy storage system, such as battery banks or grid-tied systems with net metering. Sometimes energy storage is co-located with, or placed next to, a solar energy system, and sometimes the storage system stands alone, but in either configuration, it can help more effectively integrate solar into the energy landscape. What Is Energy Storage? "Storage" refers to technologies that
